

Gin Block Rope Pulleys

LIFTEASY Gin Block Rope Pulleys are ideal for moving your loads to a higher area, such as the top of your scaffolding. You might use them to lift equipment, tools, or buckets. It is light enough that builders can use it easily, and it can fit the scaffolding tube perfectly. It is easy to attach a pulley when you are manually handling objects, and this is a better alternative to trying to move the items up yourself. You can also use these pulleys with any rope length.
